New machine model: TX Mega!

FORSSTROM is pleased to introduce yet another machine model to its range: TX Mega. This machine was presented at our stand in the Techtextil trade fair in Germany last June. It aroused considerable interest among visitors and the machine was sold on the spot at the trade fair!

FORSSTROM develops new welding method

Product development at FORSSTROM is continually in progress. The latest on the innovation front is a new welding method making it possible to join together materials that could not previously be welded using HF.

FORSSTROM supports Doctors Without Borders

FORSSTROM participated in the autumn of 2008 in the Texwork® trade fair in France. Using our TDW Mega we were able to make more than 500 radiator protections for jeeps, products that were then given to Doctors Without Borders.

Technical news and tips

- Integrated protection against temporary fall of voltage in power input to the transformer.
- Improved possibility to manually adjust press force on TX.
- Training improves quality. Ensure that your operators are motivated and qualified.

Wanted: product pictures

We have published a photo of an end product on the first page of our web site each month during the past year. We would like to continue with this even during the coming year. We therefore ask you to share your product photos with us.
